Starting the conversation with your doctor

It’s important that you and your doctor are on the same page about how pulmonary arterial hypertension (PAH) is affecting you and if your current treatment is doing enough. If you’re not targeting the prostacyclin pathway with your current treatment, ask your doctor if adding UPTRAVI® (selexipag) may be right for you.

Print or save this guide.

Review the questions on the next page.

Bring the guide to your next appointment.

What is UPTRAVI?

UPTRAVI® (selexipag) is a prescription medicine used to treat pulmonary arterial hypertension (PAH, WHO Group 1), which is high blood pressure in the arteries of your lungs.

UPTRAVI can help delay (slow down) the progression of your disease and lower your risk of being hospitalized for PAH.

It is not known if UPTRAVI is safe and effective in children.

IMPORTANT SAFETY INFORMATION

What is the most important information about UPTRAVI?

Who should not take UPTRAVI?

- Do not take UPTRAVI if you take gemfibrozil because this medicine may affect how UPTRAVI works and cause side effects

Questions to discuss with your doctor

1. Is my current treatment plan meeting my expectations?
   Think about how PAH is affecting you. What would you like to be able to do?

2. How would targeting the prostacyclin pathway fit in with my current treatment plan?
   Ask your doctor about the 3 PAH treatment pathways and which of them your current medications cover.

3. How could adding UPTRAVI® (selexipag) help me?
   Ask your doctor about the benefits of adding UPTRAVI.

4. What are the potential side effects of UPTRAVI?
   Ask your doctor if there are ways to help manage these side effects.

5. What else should I know about taking UPTRAVI?
   Ask your doctor about how to get started. Are there any patient support services available?

IMPORTANT SAFETY INFORMATION (cont’d)

What should I tell my doctor before taking UPTRAVI?

Tell your doctor if you:

- Have liver problems
- Have narrowing of the pulmonary veins (veins in your lungs). This is called pulmonary veno-occlusive disease (PVOD)
- Are pregnant or plan to become pregnant. It is not known if UPTRAVI will harm your unborn baby

IMPORTANT SAFETY INFORMATION (cont’d)

What are the possible side effects of UPTRAVI?

The most common side effects are:

- Headache
- Diarrhea
- Jaw pain
- Nausea
- Muscle pain
- Vomiting
- Pain in arms or legs
- Temporary reddening of the skin (flushing)
- Joint pain
- Low red blood cell count
- Less appetite than usual
- Rash

Talk to your doctor if you have a side effect that bothers you or does not go away. These are not all the possible side effects of UPTRAVI® (selexipag). For more information, ask your doctor or pharmacist.

You may report side effects to FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

Keep UPTRAVI and all other medicines away from children.

What other medicines might interact with UPTRAVI?

- UPTRAVI and other medicines may affect each other, causing side effects. Tell your doctor about all the medicines you are taking. Do not start any new medicine until you check with your doctor.

How should I take UPTRAVI?

- Take UPTRAVI exactly as your doctor tells you to take it. Usually, your doctor will have you take UPTRAVI twice a day. Taking UPTRAVI with food may help you tolerate UPTRAVI better.
- Swallow UPTRAVI tablets whole. Do not split, crush, or chew tablets.
- Tell your doctor if you have any form of liver disease. Your doctor may need to change your dose of UPTRAVI.
- UPTRAVI is measured in micrograms (mcg). Tablets come in the following strengths: 200, 400, 600, 800, 1000, 1200, 1400, and 1600 mcg.
